

Sustainability
Mindset
Indicator®

**/REPORT
PREPARED FOR:
EMBAFLEX-17
24/Sep/2024**

If for every dollar in minute that we invest in AI, we invest another dollar in developing our own consciousness, our own mind, we will be ok. Yuval Noah Harari

FOOD FOR THOUGHT.

How ready do you feel you are to deal with the complexity we are living in? How do you respond to the increasing polarization, to the need to expand our attention to stakeholders impacted by our daily decisions? How comfortable are you planning and yet letting go of your plans as you consider the feedback that reality is giving you? How easy is it for you to adapt, revisit your assumptions, unleash your creativity, and innovate?

These are some of the key indicators of resilience.

We find comfort in our plans, in the 'known and tried out' ways of doing things. Yet this may also be the obstacle that slows us down when we need to find new ways of acting that have a better impact on the world. While much is talked about the future that awaits us, it's easy to forget that it is *us*, each one of us, who is shaping this future with our daily decisions and actions. Yet, rushed as we all live in these demanding times, we may not take the moment to pause, observe where we are, what our most precious goals and values are, and how our day, today, is reflecting those values, leading us to those goals. And what course corrections we may want to do!

This is the Era of Purpose. How mindful are you of your larger purpose? Setting a purpose becomes the compass offering certainty in a world filled with uncertainty. Are you giving yourself the gift of a pause, to ask yourself what your larger, higher purpose could be?

You may recognize in these lines some aspects that were addressed in the statements offered to you in the Sustainability Mindset Indicator, as you were invited to reflect and choose which best represented you. This report constitutes a picture, a map of your personal journey towards a resilient, purposeful, creative mindset for flourishing as an individual, making a difference in the world. Which is sustainability at its best.

Let this report be a gift for your soul.

Welcome to your Personalized Report. This Report is based on your selections on the SMI. It is meant to be a personal development tool, to highlight aspects of your understanding, behaviors and feelings related to your Sustainability Mindset (SM).

You will find observations that you may identify with, others that you vaguely recognize, and others that perhaps don't resonate with you. Keep what you need and what makes sense to you.

You will also find questions to consider, suggestions for things you can try, and information related to the aspects covered in this report, and how these are related to the Sustainability Mindset.

Take your time reading your Report. Pause, take notes, and reflect. It is all about you, and for you. There were no wrong answers in the survey. Only good options and perhaps some that you hadn't thought of.

/WHAT YOU WILL FIND IN THE FOLLOWING PAGES

This Personalized Report is organized into several sections. The first section contains a graph, displaying how the different aspects assessed compare to each other, according to your choices in the survey. Those that occupy a larger area are your stronger ones and the narrower or missing ones are aspects of the Sustainability Mindset that are less developed or absent for you, as inferred from the combination of your answers.

The next section presents personalized descriptions of where you find yourself on your journey towards a Sustainability Mindset, in four clusters: Ecological Worldview, Systems Perspective, Emotional Intelligence, and Spiritual Intelligence.

Within each of these clusters you will find what aspects were assessed, and a graph for each aspect displaying how you connect to this topic, whether intellectually, through your actions and behaviors and/or by engaging your emotions.

If you see some areas missing within the graph, it means that either you selected “neither” for that question and therefore we don’t have information to report on, or your answers suggest you don’t engage in one or more areas (cognitive, behavioral, or affective). Similarly, if you selected “neither” for all the questions within one Sustainability Mindset Principle, we don’t include a graph, since we don’t have information to report on.

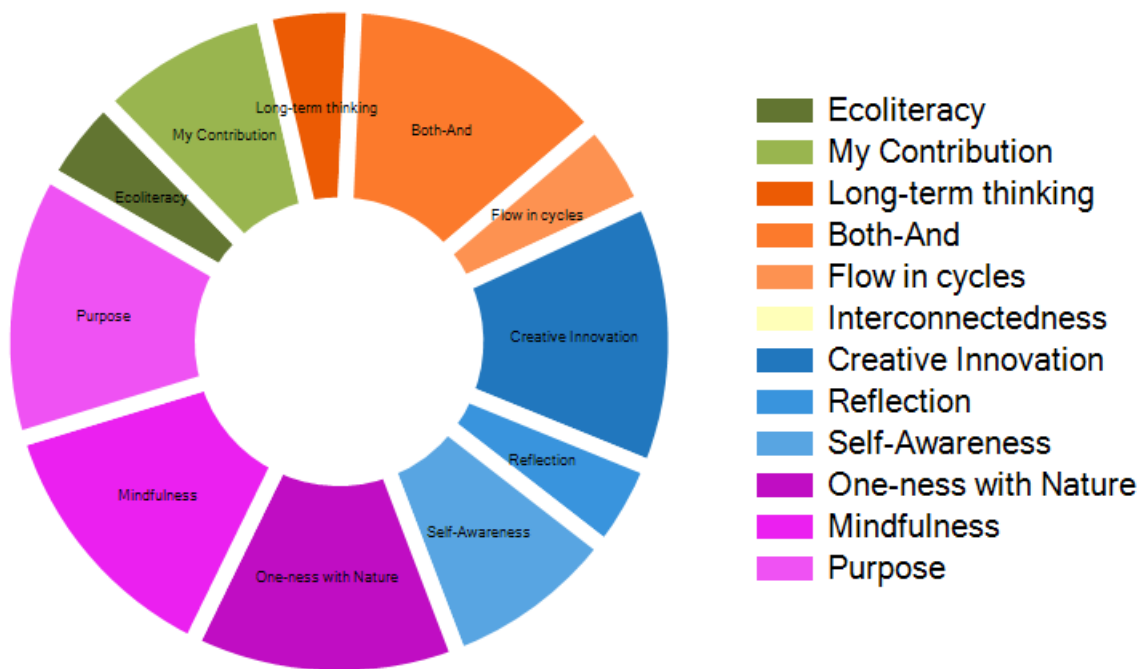

Each graph is accompanied by a box with a brief explanation, and you will find much more information in the text to include what your choices suggest, why this Principle is key for a sustainability mindset, and questions to ponder and suggestions to try.

Enjoy your journey into the realm of the Sustainability Mindset - a place where you can be your best, for yourself and for the World.

The SMI Team

**/ Your overall SUSTAINABILITY
MINDSET PROFILE**

The graph below shows your personal profile, indicating how – relatively to each other – you have developed your Sustainability Mindset. The wider sections indicate your stronger areas, and vice versa.

/ECOLOGICAL WORLDVIEW

An ECOLOGICAL WORLDVIEW is the result of having an intellectual and affective broad understanding of the planetary challenges, how they are interrelated, and how we are contributing to them.

**/WHAT IS ASSESSED HERE:
HOW YOU UNDERSTAND THE
ENVIRONMENTAL AND SOCIAL
CHALLENGES, AND HOW YOU FEEL
ABOUT IT, AND THE IMPACT ON
YOUR BEHAVIORS.**

What this tells you:

This graph shows only one dimension – behavioral - meaning that you are action- oriented, without much engagement of your feelings and without necessarily thinking about this aspect intellectually.

You might use this information to seek ways to expand your understanding and explore your emotions.

YOUR SMI RESPONSES INDICATE THAT you act in ways that can minimize your ecological or social footprint, and/or help the sustainability of our planet in your daily decisions.

At the same time, in terms of Ecoliteracy, it seems that you are aware of some facts, but perhaps do not see the larger picture of how different data connect or impact each other.

/YOU ARE COMFORTABLE staying emotionally distanced from negative feelings related to the state of our society or our planet. The benefit is that this saves you from stress, and may help you stay focused

on your daily reality. The downside is that you may miss engaging from the heart, and connecting with your deeper values and with others suffering or in need, which can be a very powerful experience.

/THOUGHTS TO PONDER WHEN YOU CONSIDER THE SM:

We are definitely living in a time of information overload. It is challenging to stay on top of all that is happening, while keeping up with our own obligations and activities. Furthermore, sustainability news tends to be on the negative side, creating doomsday scenarios and scary prophecies that can trigger anxiety, and not precisely inspiring us to act. We may tend to avoid the news because they make us feel bad, sad, or concerned.

Yet we tend to underestimate our own power and influence in shaping a better world.

/THINK ABOUT HOW YOU CAN FURTHER LEVERAGE THOSE STRENGTHS AND MANAGE SOME OF THE LIMITATIONS WHICH MAY BE HOLDING YOU BACK:

As a matter of fact, if the challenges we are currently experiencing are a product of past problematic behaviors, then we are also positively shaping the future of the planet with our current mindful decisions and restorative actions.

Understanding the scope of the sustainability challenges, from the environmental and social perspective, can allow you to start noticing linkages, relationships and connections.

/HOW ABOUT YOU TRY:

The other powerful path is in our emotions. When you allow yourself to connect from the heart with the reality of the news and find small ways to change your behavior, you might feel more present, and have a more fulfilling experience.

Understanding the state of the planet allows us to be more fully aware of the challenges, the complexity of how they are linked to each other, and to explore what it means to us.

**/WHAT IS ASSESSED HERE:
HOW YOU SEE THE RELATION
BETWEEN INDIVIDUAL DECISIONS
AND PLANETARY CHALLENGES, HOW
YOU FEEL ABOUT IT AND THE
IMPACT ON YOUR PERSONAL
BEHAVIORS.**

What this tells you:

This graph shows the two dimensions of cognitive and behavioral, meaning that you have an intellectual understanding of this aspect, and you also act upon it. We don't have enough data to report if or how you connect with your feelings related to this item.

YOUR SMI RESPONSES INDICATE THAT you periodically ponder if you are personally playing a role in the world's social or environmental problems of the world.

Certainly, you didn't create the problems intentionally, but you seem to pause and wonder in what ways you may be contributing to them.

/YOU ARE COMFORTABLE WHEN you can take a proactive role. Instead of remaining "the victim," you choose to act. You find small ways in which you are contributing to the problems and seek out those changes you could make to be less

a "part of the problem" and become part of the solution. This is a wonderful start.

/THINK ABOUT HOW YOU CAN FURTHER LEVERAGE THOSE STRENGTHS AND MANAGE SOME OF THE LIMITATIONS WHICH MAY BE HOLDING YOU BACK:

The more you observe, the more opportunities you will find to make a real difference with a few simple changes to your behavior and habits.

We cannot comment on your feelings about this topic, since you indicated (by choosing "neither") that you did not feel represented by either of the available options.

/THOUGHTS TO PONDER WHEN YOU CONSIDER THE SM:

Thinking of how we are personally contributing to the planetary challenges may not be something we do daily. Our demanding lives have many obligations and don't leave much time for reflecting on this. We are busy getting things done!

Yet when analyzing the current un-sustainability of our planet, science has clearly established a link between human behaviors in past decisions and the current problems we face. Much attention is now focused on how to repair the damage done, and how to restore damaged, depleted or endangered resources. Scientists and entrepreneurs study how to minimize current or future problems at the environmental or social level, and how to innovate to avoid negative impacts into the future.

If we collectively influenced the place, we find ourselves in now (with all its problems), that means we also hold the key to influence where we will collectively be in the future – we: meaning humankind at large, or, from a closer perspective, our families, children, and grandchildren.

/HOW ABOUT YOU TRY:

What if we could develop the habit of asking ourselves periodically: *how am I contributing to this problem?* This question opens a path of inquiry, which automatically leads to expansion of our consciousness. We become more alert to take notice, and thus more open to try out new behaviors.

This same question, by the way, is also a powerful tool that can improve our relationships and interactions with others! So often we focus on what others are doing unto us, which leaves us powerless. When we learn to pay attention to what is our role in the problems we endure, we regain control and can actually do something.

Actively thinking about your contribution is definitely an important milestone in your personal development, with planetary implications.

When we identify the ways in which we are unintentionally contributing to the problems, we have a chance to do something about them. It also expands our consciousness and develops social sensitivity.

/SYSTEMS PERSPECTIVE

When analyzing information and making decisions a SYSTEMS
PERSPECTIVE has a major impact on the sustainability of our actions.

**/WHAT IS ASSESSED HERE:
HOW YOU THINK ABOUT THE LONG-TERM IMPACT WHEN ANALYZING AND MAKING DECISIONS, COMPLEMENTING SHORT-TERM THINKING; HOW YOU FEEL ABOUT IT, AND THE IMPACT ON YOUR BEHAVIORS.**

What this tells you:

This graph shows only one dimension – cognitive - indicating that you have knowledge about this aspect, without necessarily engaging your feelings. You might use this information to explore your emotions.

We don't have enough data to report on your behaviors related to this topic.

YOUR SMI RESPONSES INDICATE THAT you have a good understanding of the long-term sustainability impacts that our decisions may have, even the simple and daily ones, not to mention behaviors commonly accepted in our society.

We cannot comment on your behaviors related to this topic, since you indicated (by choosing "neither") that you did not feel represented by either of the available options.

/THINK ABOUT HOW YOU CAN FURTHER LEVERAGE YOUR STRENGTHS AND MANAGE SOME OF THE LIMITATIONS WHICH MAY BE HOLDING YOU BACK:

As for emotions, your choices suggest that you find it puzzling to imagine future consequences of your actions, because it requires a stretch of the imagination. It can make you feel responsible for future impacts that you can't quite conceive.

This unpredictability can create anxiety, and it seems to be important for you to limit the uncertainty as much as possible.

/THOUGHTS TO PONDER WHEN YOU CONSIDER THE SM:

There is a tacit pressure to act promptly and focus on that which needs immediate attention. This is very important, and there are many circumstances where this way of responding is the optimal, or even the only one that matters. A fire in the house, for example. We can sense the urgency and it is not a good idea to pause and reflect on the long-term implications of the fire.

But for many daily decisions, the context is different, and yet we still prioritize short term thinking, often without even pondering any medium- or long-term impacts of what we are doing. The stream of life, our colleagues, perhaps everyone with whom we interact takes for granted that we "all" act this way.

On the other hand, with greater understanding of the social and environmental problems we are facing, it has become clear that the law of cause-and-effect is always at play, even if not immediately obvious. In other words, the consequences of our daily actions do have impacts - some over time, some just in a different geography, and many on both.

As with other aspects which are key for a sustainability mindset, it is not a question of choosing one over the other, but a matter of balancing both views and taking both time horizons into account.

/HOW ABOUT YOU TRY:

This mental habit expands our consciousness, as we become more aware of the way we are impacting others and the world. Not thinking about this doesn't stop it from happening. Stretching our imagination to consider potential impacts across time helps us make better decisions, and play a more active role in shaping a better world.

For example, what might be some long-term consequences for sustainability of a purchasing decision you recently made? What would your latest decision look like if you had considered these potential long-term impacts?

It takes practice to develop new mental habits, but they too, can have long term impacts - for the better.

Every action has consequences that are not immediately visible. Considering the long-term when analyzing situations and making decisions has a positive impact on global sustainability.

**/WHAT IS ASSESSED HERE:
HOW YOU THINK ABOUT AND DEAL
WITH AMBIGUITY AND PARADOXES,
HOW YOU RECOGNIZE DIVERSITY,
FEEL ABOUT IT AND ACT TOWARDS
IT.**

What this tells you:

This graph shows that your approach to the assessed topic is both cognitive and affective, but you are not necessarily translating what you know and feel into actions. You might use this information to explore new habits and daily changes for a sustainability purpose.

YOUR SMI RESPONSES INDICATE THAT you are an empathic person who knows how important it is to listen to other perspectives, and to find solutions that can accommodate diverse needs.

Not being inclusive may also make you feel guilty, selfish, righteous, or irresponsible. This is your internal compass!

At the same time, you are a pragmatic person that likes clarity in life. **You are most comfortable** with clear choices - black and white options - and find a sense of stability and reassurance in holding onto your values and your worldview. When faced

with a new situation, you seek to rapidly frame it within what you have learned is "right" or "wrong."

This may be useful for avoiding gray areas, although it may also create a tension: is it possible to balance honoring your values, what "feels right", with accepting very opposite positions?

/THINK ABOUT HOW YOU CAN FURTHER LEVERAGE YOUR STRENGTHS AND MANAGE SOME OF THE LIMITATIONS WHICH MAY BE HOLDING YOU BACK:

Welcome to life! You are not alone in the struggle. You already have come far in your personal journey, as you can empathize with others and take a glance into their world.

What are the boundaries? In what areas is inclusive thinking and acting easy for you, and which situations are more challenging? This is your work.

You have a very valuable characteristic, particularly in our sustainability-challenged times, where the solutions to our environmental or social problems have to be found considering a wide array of interests and needs.

/THOUGHTS TO PONDER WHEN YOU CONSIDER THE SM:

Many of our world's sustainability challenges originate in choices such as: "either the planet or the economy" and "either protect the wolves or the farmer." Yet, *either-or* choices can be misleading, and have us believe there are win-lose solutions that work.

But do they really? If the cost is high, do they still work? When we find ourselves in a situation where

we see it the right way, and others are wrong, what may we be missing that these others are seeing? How could we all benefit from having a fuller picture?

It seems that today, more than ever, we are collectively being confronted with paradoxes and ambiguity. Increased transparency and access to information from around the world makes us aware of very different ways of thinking, being and acting with which we may not agree or be comfortable.

Challenging as this may be, there is a benefit to it: We are becoming aware of our own worldviews just by realizing that there are other ways of seeing and feeling. This is an evolutionary insight of great value, the foundation for more peaceful societies.

In a way, life is prompting us to expand our understanding and our scope of caring, which go hand in hand. When we understand something, we can begin caring. This is the start of a better world for all.

It is wonderful to experience our perspective included by others. Since we cannot control what others think or do, but have control over our own way of thinking, there may be an interesting path worth exploring here.

/HOW ABOUT YOU TRY:

Which are situations where either-or thinking is appropriate, and when do we need a creative both-and solution?

There are multiple daily opportunities to convert your natural empathy into inclusive behaviors. Any thoughts?

Both+and thinking allows us to understand paradoxes and calls for creative solutions that are inclusive of all stakeholders.

**/WHAT IS ASSESSED HERE:
HOW YOU BALANCE YOUR CAPACITY
TO ANALYZE AND PLAN WITH THE
UNDERSTANDING OF NATURAL
CYCLES, AND MAKE THEM PART OF
YOUR MINDSET.**

What this tells you:

This graph shows only one dimension – cognitive - meaning that you have an intellectual understanding about this aspect. You are not necessarily engaging your feelings nor converting them into actions. You might use this information to explore your emotions related to this aspect of the sustainability mindset, and perhaps find ways to convert your understanding into actions.

YOUR SMI RESPONSES INDICATE THAT you are profoundly committed to actions, enjoying the challenges life offers you.

/YOU ARE VERY COMFORTABLE crafting plans and setting goals to measure your progress. You derive a sense of fulfillment and satisfaction when you achieve the goals you set for yourself. This allows you to feel empowered and in control, which is a nice feeling, particularly as it avoids the stress of uncertainty.

At the same time, you are aware of the commonly shared belief that humans are the most intelligent species, the apex of creation, with the intellectual ability to control nature. And you have come to realize this assumption is most frequently contradicted by reality, particularly when we think in a linear way, acting outside the cycles of Nature.

/THINK ABOUT HOW YOU CAN FURTHER LEVERAGE YOUR STRENGTHS AND MANAGE SOME OF THE LIMITATIONS WHICH MAY BE HOLDING YOU BACK:

While planning is a way to feel in control of situations, you also have noticed that it is constantly challenged since life - with its countless variables - is too complex to be managed.

Do you experience frustration at times when things don't work out as you planned, or expected? How do you react? Do you let go of your plans and observe what the events are telling you, or do you use persistence and incremental efforts to stay on top of your planned course?

/THOUGHTS TO PONDER WHEN YOU CONSIDER THE SM:

You may be wondering why planning is related to several key aspects for a sustainability mindset. The connection is not in the planning as an activity per se, but in the way we think and process information when we plan. Planning is about organizing and structuring in order to control outcomes. Planning is linear by definition -one step after the other - and it assumes cause-effect relationships. But what about multi-effects, multi-causes, and feedback loops?

Contrast this with the sustainability problems we are facing. To begin with, they are complex and multidimensional by their very nature. Many are

the result of our linear thinking, for example we believe that we can pursue unlimited growth, yet depletion of natural resources shows us this is not possible.

Our reliance on the human mind can create a collective assumption that we are in control, but a “small” manifestation like Covid-19 arrives as a surprise to debunk the myth of our own superiority.

/HOW ABOUT YOU TRY:

Planning in itself is not the problem but rather, excessive reliance on carefully crafted steps. How do you incorporate the cycles of nature into your planning? As an example, do you accept phases of growth and decline - aging and impermanence, along with endings and mortality followed by new beginnings and birth? How do you incorporate humanity as part of Nature, rather than its controller? Many implications to think about, indeed.

Here a few thoughts to ponder. Do you see yourself balanced in terms of making and letting go of plans? How do you balance structure and flow, organization and flexibility?

Relaxing your grip on plans may cause uncertainty, yet like swimming along with the river’s current, it can also increase your speed, and reduce the stress of resisting obstacles. Worth a try.

There are no linear processes in Nature: Everything flows in cycles of birth, growth, death, and rebirth.

Many aspects of man-made unsustainability of the planet are a result of the misconception that we are not governed by this law of Nature.

**/WHAT IS ASSESSED HERE:
HOW YOU UNDERSTAND AND
EXPERIENCE INTERCONNECTEDNESS,
VERSUS VALUES LIKE AUTONOMY
AND INDEPENDENCE.**

YOUR SMI RESPONSES INDICATE THAT you thrive in contexts where you can compete and work towards being your personal best.

You believe independence and autonomy are very important aspects of human life, perhaps as a combination of a given right, a personal goal and a precious virtue to cultivate. They signify ownership and accountability to you.

You are comfortable when you are faced with challenges. In fact, you enjoy the adrenaline that motivates you. The excitement of seeking to be successful, to win or to outperform others is a great feeling for you.

Recognition may be a reward, but it is not always external: it can also be for your personal satisfaction and sense of accomplishment. You feel proud of your achievements and perceive them as a validation of your autonomy and personal capabilities in action. It is important for you to be self-sufficient as much as possible. (This may come at a price).

**/THINK ABOUT HOW YOU CAN
FURTHER LEVERAGE YOUR
STRENGTHS AND MANAGE SOME
OF THE LIMITATIONS WHICH MAY
BE HOLDING YOU BACK:**

It is not always possible to live up to other people's expectations, not to mention our own, which often are even higher. Furthermore, in many settings

where teamwork or collaboration is expected, it may be challenging to balance your individual performance with the collective contributions, and your personal efforts, gifts or skills may go unrecognized, or possibly even unappreciated.

Let's pause for a moment: Can you name one achievement that was purely and authentically your own without another person playing any role in it?

**/THOUGHTS TO PONDER WHEN YOU
CONSIDER THE SM:**

You may not have given it much thought, but the polarities of independence vs. interconnectedness and competition vs. collaboration are of particular relevance when focusing on sustainability. To begin with, the environmental and social challenges are complex and multidimensional, making it impossible for any one person to solve on their own. It is only through collective thinking, action and the collaboration of multiple stakeholders that we will be able to develop alternatives. (This, by the way, makes sustainability a great opportunity for contributing personal skills to a larger cause).

While certain cultures have a collectivistic framework, most of the western-northern culture - widely exported and globalized - is individualistic and celebrates personal achievement. However, is this realistic and even feasible?

/HOW ABOUT YOU TRY:

We invite you to explore what autonomy means for you. What are the roots of this value for you, perhaps in your upbringing or in your current context? Is this authentically a priority for you, or is it something automatically inherited, or adopted without giving it much thought?

If you have identified an accomplishment that you consider authentically your merit, make a list of who may have played a role in it. Rank them, in order of relevance or impact on your success.

What does this exercise tell you about the polarity of autonomy versus interconnectedness?

When we see interconnectedness, we understand the importance of diversity, and our decisions and actions become more inclusive, which contributes to the sustainability of the whole.

/EMOTIONAL INTELLIGENCE

Understanding ourselves through the anchors of our identity, the pace of our life, and how we consider our intuitive wisdom are key for a sustainability mindset.

/WHAT IS ASSESSED HERE: HOW YOU INCORPORATE NON- RATIONAL INFORMATION, INTUITIVE KNOWING, CREATIVITY AND IMAGINATION IN ORDER TO BALANCE RATIONAL THINKING, AND HOW YOU FEEL ABOUT IT.

What this tells you:

This graph shows that your approach to the assessed topic is both cognitive and affective, but you are not necessarily translating what you know and feel into actions. You might use this information to explore new habits and daily changes for a sustainability purpose.

YOUR SMI RESPONSES INDICATE THAT you have a clear understanding of the value of combining your logical and analytical thinking abilities with creative imagination.

You know that the human mind is capable of great accomplishments, as history has shown, when intuition and creative ideas are coupled with rational thinking and good strategies. You may even trust that our sustainability problems could be addressed with a good balance of these abilities.

Aligned with that understanding, you actually find uncertainty exciting! You enjoy the fact that reality presents you with plenty of unknowns.

Interestingly, at the same time, your choices in the questionnaire indicate that **you are comfortable** contributing largely rational thinking when analyzing a problem. You may find yourself in the role of the defender of structures and stability, and the keeper of the status quo. You are very careful in avoiding what you consider unnecessary risks.

At first glance, an interesting disconnect appears:

- Your avoidance of risk in certain contexts
- with your tolerance of uncertainty in not knowing how something might work out. You are indeed able to live with a certain degree of risk-taking. What a valuable asset for these times!

/THINK ABOUT HOW YOU CAN FURTHER LEVERAGE YOUR STRENGTHS AND MANAGE SOME OF THE LIMITATIONS WHICH MAY BE HOLDING YOU BACK:

Maybe you channel the adventure-ready aspects of your personality into specific situations - perhaps your vacation time, or your free time. That is where your creativity and even your intuitive wisdom is possibly expressed.

If that is the case, do you think that you could bring it more into other contexts? What would have to be true and how can you influence this? Do you hold on to the idea that your rational thinking is a more important skill to solve problems? If so, why?

This must create some tension - between your need for order and strategic plans and your moments of unleashed imagination!

/THOUGHTS TO PONDER WHEN YOU CONSIDER THE SM:

You know that the sustainability challenges we are facing are largely new, and as COVID-19 taught us, increasingly situations arise for which we don't have previous experience or science on which to rely. We have become more aware of this complexity of our challenges, and we are skeptical of simplistic solutions.

However, this also requires entry into uncharted territories. Resilience calls for flexibility in adapting to new situations, and this entails innovating and experimenting. Having no plans or blueprints to follow may be unsettling, and the only choice is to take some risks.

It seems that you have a reservoir of imagination available to tap into, and perhaps intuitive wisdom as well. This can help complement your strategic thinking, and maximize your achievements for the benefit of all.

Resilience is based on constant creativity, innovation, and experimentation. When we neglect the non-rational wisdom we have in us, our solutions are missing critical information, and may create negative impacts on the ecosystem and society.

**/WHAT IS ASSESSED HERE:
HOW YOU NOTICE YOUR OWN PACE,
AND HOW YOU BALANCE RAPID
RESPONSE WITH MAKING TIME TO
PONDER AND REFLECT BEFORE
ACTING. AND HOW THIS MAKES
YOU FEEL.**

What this tells you:

This graph shows only one dimension – behavioral - meaning that you are action- oriented, without much engagement of your feelings and without necessarily thinking about this aspect intellectually. You might use this information to seek ways to expand your understanding and explore your emotions.

YOUR SMI RESPONSES INDICATE THAT you are a person adapted to the times we are living.

You see the importance of swift actions in a world that you believe is unforgiving of slow-movers. You know that the present day pace is fast or highly accelerated, depending upon who you ask.

You are comfortable multitasking and find it very stimulating. You actually enjoy the tension which brings out your best performance. You thrive on the adrenaline of urgency!

Interestingly however, your choices also indicate that in your day-to-day you tend to pause and seek to explore what might be at stake in a decision, or check the assumptions at play before acting. This behavior, seemingly at odds with your nature, must have given you good results in the past, which reinforced it and now keeps you decelerating in critical moments. Congratulations if this is the case, since you are helping to avoid many problems in the future. A valuable and timely contribution!

/THOUGHTS TO PONDER WHEN YOU CONSIDER THE SM:

Since we are looking at these aspects from the perspective of a sustainability mindset, let's pause and think about what behaviors might be most effective as well as much needed.

While there is a call for urgent action about climate change and the related social and environmental problems, many modern sustainability challenges are actually the result of overlooked prior potential impacts. For decades, well-intended decisions were largely made by quickly identifying the best option. But today we are understanding better that problems are complex, that solutions impact a multiplicity of future stakeholders, and that there are always consequences.

Of course, it is not possible to anticipate all scenarios, but pausing and checking assumptions can be very useful to avoid future problems. For example, what can you learn to avoid or repeat from past experiences? Can you identify, in hindsight, something that was at stake and overlooked because you were trying to act fast? When you have more information you can better

weigh alternatives. Although this requires to slow down!

/THINK ABOUT HOW YOU CAN FURTHER LEVERAGE YOUR STRENGTHS AND MANAGE SOME OF THE LIMITATIONS WHICH MAY BE HOLDING YOU BACK:

We cannot both act fast and ponder carefully. The question becomes: Is decisiveness and fast action coming at an expensive price for you and others, us, the next generations, and the ecosystem?

You are blessed to have good endurance of tension to sustain multitasking and even enjoy it. Does it ever happen to you that you wish you could relax more, slow down and do nothing? Does your body, your mind or perhaps your soul call for a break, less stress? What message may be there for you, waiting to be heard? Food for thought!

/HOW ABOUT YOU TRY:

Here is a simple and challenging exercise for multitaskers like you. Set your alarm to ring once every two hours. When the alarm goes off, you pause whatever you are doing, and set the timer for 60 seconds. During that minute you close your eyes, or look out the window, just sitting in silence for a full minute. It is not a time to think of what you still need to do, or what you should be doing: it's just a gift of 60 seconds for you, to do nothing.

If this is too difficult, start setting the alarm once a day, then slowly increase the times for a pause.

Reflective practices help to pause, and to ponder the situation and its implications before jumping into action.

**/WHAT IS ASSESSED HERE:
HOW AWARE YOU ARE ABOUT THE
ANCHORS OF YOUR IDENTITY AND
YOUR VALUES; HOW YOU FEEL AND
ACT IN CONSEQUENCE.**

What this tells you:

If a graph shows the two dimensions - cognitive and behavioral - it means that your tendency is to distance yourself from your feelings, particularly in the aspect assessed here. You have a good understanding about it, and are acting upon it, but you might want to further explore your emotions in relation to it.

YOUR SMI RESPONSES INDICATE THAT you believe the paradigm we have long been living with is due for revision.

You realize that values like growth and progress may be linked to an assumption of unlimited resources, which may not be realistic. You have been noticing that many of your automatic behaviors are actually not very environmentally friendly, or perhaps have some kind of negative social impact.

You are comfortable trying to make some changes, which probably was somewhat challenging and may not have left you satisfied with yourself.

/ THINK ABOUT HOW YOU CAN FURTHER LEVERAGE THOSE STRENGTHS AND MANAGE SOME OF THE LIMITATIONS WHICH MAY BE HOLDING YOU BACK:

Could it be that these failed attempts discouraged you from continuing to do more? You selected answers in this survey that describe a disenchantment of sorts. For example, you are aware that there is an increasing trend to highlight the negative consequences of progress, of capitalism, or of society in general, and this seems to make you feel uncomfortable, even upset.

It is possible that you, yourself, sense a personal tension between the gravity of what we are facing as humanity, and your individual bewilderment about what you might actually do to help prevent or solve the problems. For instance, you may feel that climate change is too complex to be attributed to our mere daily behaviors.

In addition, the tension may put into question the values with which you were raised or grew up, and this is likely an uncomfortable experience, particularly if these values are important for you, or have been an important part of your identity.

Achievement, competition, being a winner, not being a not a loser, and success may be important foundations of who you are. You may wonder what makes them suddenly feel wrong. These may be difficult dilemmas for you right now.

And yet this is a very important moment of awareness: change starts with our noticing some discomfort about something, and we want to do something about it to feel better (or at least less bad). In this case, you seem to have achieved this

very important step. Of course it can be overwhelming to think about the complex problems. But what if you start small?

/THOUGHTS TO PONDER WHEN YOU CONSIDER THE SM:

Let's pause for a moment. This survey was designed around the Sustainability Mindset, which is a way of thinking and being, to optimally adapt to the moment in which we are living. This Mindset focuses on using our natural gifts to shape a better future, for ourselves and for all, the ecosystem included.

Research has proven that what may sound overwhelming, actually can be broken down into small, realistic ways to contribute to the greater good, and, as you well know, feel great at the same time. The first step is taking a fresh look at what surrounds us.

Undoubtedly, there are social and environmentally related challenges everywhere. Some happen locally, others across borders. Science has been linking many of these issues to human behaviors, such as consumption of unhealthy foods, depletion of natural resources, pollution or contamination of air, soil, and water. And we are left to deal with the consequences today, trapped in a paradigm that prioritizes values that have a negative impact, such as thoughtless consumption.

But what if we realized that some of our habits today are (unintentionally) contributing to more of these problems in the future? And vice versa: What if a change in a small habit today could do its part to shape a better future?

/HOW ABOUT YOU TRY:

Can you think of a few habits of yours that might qualify? We don't know what we can do until we try. And when we put aside cynicism for a moment, we actually may feel a deep sense of joy. That alone is worth trying.

Another suggestion is that you explore the roots of some values that are important for you, such as success, winning, and outperforming others. Where can you trace their origins? Perhaps in your upbringing, or in your current context? What do they represent for you, which makes them important? Are they authentically yours, or are they perhaps inherited, adopted without giving much thought to it?

When we explore our personal values, beliefs, assumptions, and motivations, we gain greater control over our actions, and we can see new alternative behaviors.

/SPIRITUAL INTELLIGENCE

The spiritual orientation to Nature, to ourselves and to others are key factors for a Sustainability Mindset, as they impact the quality of our actions.

**/WHAT IS ASSESSED HERE:
HOW YOU EXPERIENCE NATURE,
HOW YOU UNDERSTAND THE
HUMAN RELATIONSHIP WITH
NATURE, AND YOUR RELATED
FEELINGS AND BEHAVIORS.**

What this tells you:

This graph shows that your approach to the assessed topic is both cognitive and affective, but you are not necessarily translating what you know and feel into actions. You might use this information to explore new habits and daily changes for a sustainability purpose.

YOUR SMI RESPONSES INDICATE THAT you think of Nature as an experience that offers more wisdom than we can intellectually grasp. This understanding may be the result of some special moments, when you stood in awe admiring Nature, your heart perhaps filled with joy and some kind of wordless experience of beauty.

You see the limitations of pure rationality and realize that the intellectual capability is valuable for building scientific knowledge, but also frequently overstated. Our comprehension of the natural world, including

our bodies, has advanced over time, but in the history of science findings are always within the constraints of available instruments, paradigms, or assumptions. It is clear to you that over time, the development of more precise measurement techniques or revolutionary thinking has certainly revealed the myopic or biased conclusions of the past!

However, you are also comfortable acting with a utilitarian approach to natural resources, considering the rights granted by our belief in “human superiority”.

Without doubt, many scientific discoveries and improvements of our quality of life have shown the power of the human mind. Yet you may have also noticed that some betterments have come at a cost for the environment or society, and we are collectively paying that price, for example, soil erosion or waterway contamination from chemical crop fertilizers meant to enhance soil productivity.

The human-centric paradigm that we collectively adopted and believe has begun to show some shortcomings, inviting us to revisit our place and role in the larger ecosystem.

What are some undesirable consequences of human progress that you have personally experienced? What message may be in this for you?

/THINK ABOUT HOW YOU CAN LEVERAGE YOUR STRENGTHS AND MANAGE SOME OF THE LIMITATIONS WHICH MAY BE HOLDING YOU BACK:

The combination of your choices in this instrument seems to show a disconnect between what you believe and value, and your actions. You have been blessed with some powerful experiences of oneness with Nature that give you an empathic disposition, yet they don't seem to manifest in how you act. It

may be a way of blending into a context that rewards rational thinking and intellectual capabilities.

But is that who you really are?

/THOUGHTS TO PONDER WHEN YOU CONSIDER THE SM:

According to a 2018 United Nations study, over 55% of the world's population lives in urban areas, a proportion that is expected to increase to 68% by 2050. As a result, for many of us, the disconnection from Nature is rather “natural.”

Hectic life in large cities makes it difficult for us to remember that we are more than individuals moving through traffic and buildings. The common associations with the word “Nature” may be vacation time, a park, or a documentary. What about our food? Our body? The materials of every object we use?

We rely on and praise scientific progress, but history has demonstrated that scientific findings are always within the constraints of available instruments, paradigms, or assumptions and many myopic or biased conclusions have been revealed with the passage of time, the development of more precise measurement techniques and revolutionary thinking. Biomimicry, a discipline studying how Nature solves problems, has been highlighting the wisdom of billions of years of evolution, and suggesting that we may find more answers in Nature than through our human intellect.

In fact, indigenous people have demonstrated a more resilient lifestyle, based on an intuitive connection to Nature.

This disconnection from Nature leads to a utilitarian relationship: Nature is reduced to instrumental resources for human needs and wants, causing not only spiritual alienation, but is the root cause for many unsustainability behaviors. What impacts do you see from having a utilitarian relationship with Nature?

When we understand something, we start caring for it. Understanding that we are one with Nature, a species within species, is a profound experience that

can shape behaviors leading to a more harmonious relationship with the self, with each other and with all beings.

You seem to have experienced it: a sensorial, intuitive understanding. It is not something to be learned, but rather an experience that we allow to happen, and which makes us remember something we have always known but had forgotten.

/HOW ABOUT YOU TRY:

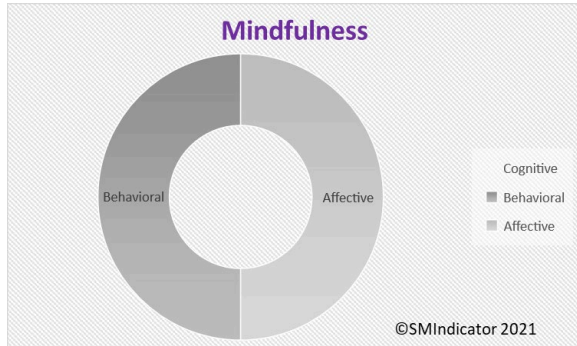

Sometimes we realize that our thinking, feeling, and acting are not aligned. When we notice it, we may feel discomfort and tension- something out of sync. A sustainability mindset is not just harmony with the ecosystem, but it starts within us.

Is there something you need to revise, to feel more authentically who you are? What part of you is still clinging to an old paradigm, and why might that be so?

Understanding that we are one with Nature, a species within species, is a powerful spiritual experience that can shape behaviors leading to a more harmonious relationship with each other and all beings.

**/WHAT IS ASSESSED HERE:
HOW YOU THINK ABOUT THE
MEANING, ROLE AND VALUE OF
MINDFULNESS AND ITS PRACTICE,
AND HOW YOU FEEL ABOUT IT.**

What this tells you:

This graph shows two dimensions, the behavioral and affective. This means that you connect emotionally with this aspect, and act upon it, perhaps without a full understanding of why it is important. You may find it interesting to deepen your understanding of this principle.

YOUR SMI RESPONSES INDICATE THAT you have a pragmatic approach to life.

You are very aware that society rewards action and its ensuing achievements, rather than inaction and passivity, which is kind of what mindfulness practice seems to you. You may be aware that other cultures have different behavioral patterns from the one in which you live, but you are cognizant of the importance of adapting to the culture to which you belong. As the saying goes, “when in Rome do as the Romans do”.

You realize there may be an impact on our health and wellness, like being in a race to pursue the moving targets of our goals.

You indicate that you have discovered activities that quiet your mind, and help you gain some inner peace. You may not make these a regular practice, but when you engage in them, you can recognize the positive effect they have on your wellbeing. At the same time, it seems quite challenging for you to make the time and space for these moments.

/THINK ABOUT HOW YOU CAN FURTHER LEVERAGE YOUR STRENGTHS AND MANAGE SOME OF THE LIMITATIONS WHICH MAY BE HOLDING YOU BACK:

Studies show the physical and emotional consequences of a constant focus on doing while overlooking the more profound dimensions of “being,” such as reflection, spiritual or religious practices, time to recharge and find ourselves, and time to connect with our deeper self.

You have experienced it firsthand: When you allow some time to nurture this neglected part of yourself, you experience a positive impact on how you feel about yourself, and how you interact with others. At the same time, it seems quite challenging to make the time and space for those moments.

Sometimes you hear people say “you should do less, you should relax, you should take time for yourself”, and these suggestions may sound anywhere from unreal to ridiculous from your perspective, since you are the one living with the challenges. Of course you know what you ‘should’ do, but you are doing your best all the time.

Pausing and stepping away from our task clears our mind, and we can get back with renewed energy. Is this something you remember to do when you need it? If not, how could you help yourself remember it just in time?

/HOW ABOUT YOU TRY:

So here are some questions for you to contemplate.

Has it ever occurred to you that the fact that “everyone lives like this” may not necessarily make it ideal? Have you ever reflected on the high value our world gives to consumption, linking “who we are” with “what we have or own”? How do these thoughts align with your experience, and with your values? Does your reality reflect the priorities that are important for you? If not, what are some small changes you can make?

Mindfulness is being fully present, experiencing connectedness with all that is. Mindfulness enhances awareness and compassion, and predisposes to social and environmental actions.

/THOUGHTS TO PONDER WHEN YOU CONSIDER THE SM:

From the perspective of a sustainability mindset, mindfulness is both a key practice and an amazing result. Research has shown a direct link between individuals that have some contemplative practices not just with their physical and psychological health, but also with the emergence of feelings of empathy and compassion.

This creates a disposition towards positive social and environmental actions, and the resulting satisfaction feeds a positive reinforcing loop. In other words, the better we feel about something we’ve done, the more we seek to repeat the experience.

When we access and display a more balanced version of ourselves, we convey an unspoken message to the people with whom we interact, not just by what we say or how we behave, but through our attitude and energy. This has a proven positive influence on others, as science has identified with the phenomenon of “emotional contagion.”

In other words, when we develop a sense of peace for ourselves, we are also radiating a gift of peace to the world. What are some ideas to try out?

**/WHAT IS ASSESSED HERE:
WHAT YOU THINK ABOUT HAVING A
PURPOSE IN LIFE, PARTICULARLY
SOMETHING THAT IS IN SERVICE TO
OTHERS; HOW THIS FITS YOUR
REALITY AND HOW YOU FEEL ABOUT
IT.**

What this tells you:

This graph shows that your approach to the assessed topic is both cognitive and affective, but you are not necessarily translating what you know and feel into actions. You might use this information to explore new habits and daily changes for a sustainability purpose.

YOUR SMI RESPONSES INDICATE THAT you think it is important to find a purpose in life, to identify something that, by making a difference, makes our life meaningful. It is not a good feeling for you not to have a meaningful life. And you wonder if you are on journey of seeking and finding answers to the question of “Why am I here?” This is a great question!

Indeed, for some the answer is clear and endures over time. For others, it changes and makes us seek renewed answers. When what you are doing no longer satisfies you, it is actually a great signal. The tension we feel indicates that something has already begun to shift, and we are on a path of further growth and transformation.

At the same time, you sense that you need to set priorities, and what is urgent needs attention before what sounds important, like thinking about what our purpose in life is.

Focusing is an important skill in times when there seem to be more obligations and things we are expected to take care of, than hours in a day. Work, family, relationships, career or health issues can use up all your available energy, often even leaving you with the feeling that nothing you do is enough.

When topics arise like contributing to society, you believe this may be something to do once your other obligations diminish and you free up some time, hopefully in retirement.

**/THINK ABOUT HOW YOU CAN FURTHER
LEVERAGE YOUR STRENGTHS AND
MANAGE SOME OF THE LIMITATIONS
WHICH MAY BE HOLDING YOU BACK:**

This resolution doesn't fully satisfy you, which is actually a great start. When we sense a tension between what we are doing and what we would like, something has already started to shift, and we are on a path of growth and transformation.

Research has shown that individuals who engage in activities of service to the community, volunteering or some kind of initiative for the greater good have a higher sense of wellbeing than those who do not. This includes benefits to health, feelings of joy, increased self-esteem, and personal satisfaction.

In contrast, you may have personally experienced that focusing on the extreme demands of your life sometimes takes a toll on your health, your mood, creating tension or anxiety, disrupts your sleep or impacts how you interact with others. Perhaps at times, you don't feel happy with yourself or with others.

Have you asked yourself what you could do to feel better, to lower your stress? Perhaps you have, but the answer you found may have been that as long as your demands remain high, there is not much you can do.

/SO HERE, AGAIN, ARE SOME QUESTIONS TO EVALUATE:

Which of the activities that you engage in are a necessity, a “must-do,” and which ones represent a choice? Who would do these activities if it were not you? What would it take to let go of some activities, or perhaps of “how” you do them?

These questions have an agenda: to help you free up some time and space to try out a different experience, one that consists of something you do for others outside your inner circle.

/THOUGHTS TO PONDER WHEN YOU CONSIDER THE SM:

The research regarding core aspects for a sustainability mindset identified the role of activities intentionally done for the “greater good.” The state of our planet is such that it requires each of us to step up and play an active role in shaping a better world.

The actions needed, whether large or small, share a similar result: they provide us with a

feeling of joy, which then we want to replicate to feel good again, thus creating a reinforcing loop. Interestingly, we tend to think that we need to take care of ourselves first, before helping others, but the facts show that when we do small acts of

kindness for others, we feel much better ourselves.

/HOW ABOUT YOU TRY:

With this in mind, what are some new experiments you can try? What are some different things for the greater good that you already did, and perhaps could repeat, do regularly, or improve? Which of your natural gifts and skills could you put into service for the greater good, in a cause for which you have a passion?

Don’t get intimidated by grandiose words like ‘changing the world” or having a life mission or purpose. In fact, each small action of kindness has already an impact that we may never be able to imagine. That is also changing the world, one interaction at a time.

Defining our purpose provides an unconscious compass, and when it is grounded in values of our higher self, we actively shape a better world.
